

Internet Radio Linking Project (IRLP) Wiki

Keeping the Radio in Amateur Radio

Setting up wifi on a Debian IRLP node is fairly easy to do.

First, you will want to install wireless-tools and the wpa_supplicant

COMMAND: `apt-get install wireless-tools wpa_supplicant`

Then have a look at

<http://wiki.debian.org/WiFi> [<http://wiki.debian.org/WiFi>] <http://wiki.debian.org/WiFi/HowToUse>
[<http://wiki.debian.org/WiFi/HowToUse>]

You need to manually edit your `/etc/network/interfaces` file to do it, and that is the hardest part.

Some good info about systems that require boot-time firmware is available at:

<http://omer.me/2012/04/setting-up-wireless-networks-under-debian-on-raspberry-pi/> [<http://omer.me/2012/04/setting-up-wireless-networks-under-debian-on-raspberry-pi/>]
